Carete Dashboard — flow

How a member becomes billable, becomes a claim, becomes a report.

MEMBERS

Add Member

Intake form

Captures name, DOB, MCP, CIN, address, homeless status.

status: pending

Member appears in the Eligibility Queue, awaiting verification.

Eligibility check

API call > MCP

X12 270 sent to the member's plan. 271 response parsed for active Medi-Cal coverage + ECM / CS benefit category. Writes back active or ineligible.

status: active

Enrolled. Service lines can now be billed against this member.

status: ineligible

Rejected by MCP — not billable.

CLAIMS

Add Service

Pick program > service > variant from DHCS catalog. Variant carries HCPCS, modifiers, unit, and defaultRate. Charge auto-fills as rate × units, editable.

Service line

status: pending

Stored with memberId, serviceId + variantId, dates, units, charge, place of service.

Bundle invoice

Multi-select pending lines > PDF export. One member, one payer (MCP), <= 6 service lines per invoice. Org NPI / TIN pulled from Settings.

MCP adjudicates

Submitted to payer (mail · portal · fax). Plan returns paid or denied.

status: active or denied

Active = paid, settled. Denied = surface for follow-up.

REPORTS

Aggregations

Reads from members store + claims store.

KPIs

- Reimbursement — $ from active claims
- Enrollment rate — active / total members
- Services delivered — count of lines, by program
- Claims success rate — active / submitted
- Denial rate — denied / submitted

Exports

- All Claims (CSV)
- All Members (CSV)
- Services delivered (CSV)
- Custom export builder

no

Legend: filled boxes = highlighted step (where the real work happens). Grey boxes = terminal state.
Eligibility is a labelled API step here — today the dashboard toggles status manually; production wires X12 270/271 to each MCP.
